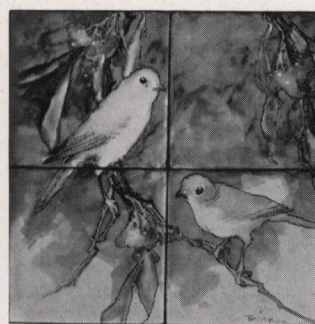

FIG. 5

AMONG the most unusual of WELLER TILES are the panels. Each a beautiful painting, with vibrant light and color. The above are replicas of the SILVER-TONE PROCESS in which the range of color and subjects are unlimited. In these panels the WELLER ARTISTS have obtained the soft full tones of the modern water color masterpieces.

On page three are replicas of the HUDSON PROCESS of Weller ART PANELS. These panels have a three dimensional depth with an exceptional warmth of color never before obtained in the ceramic art. They are a result of twenty-five years of research.

Having mastered these techniques, WELLER POTTERIES are able to handle an unlimited range of subjects. For Architects and Tile Contractors Weller will make up any design possible to the ceramic art. They will also follow any design or motif the architect or tile contractor may desire.
